

## Display It LED Panels Adjustment Tubes Installation

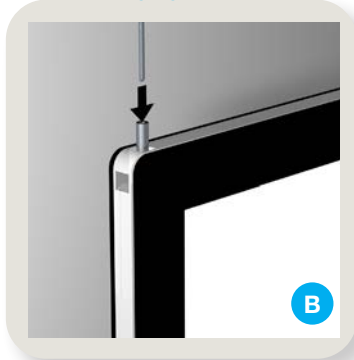

### Orientations

### Metallic Adjustment Tube

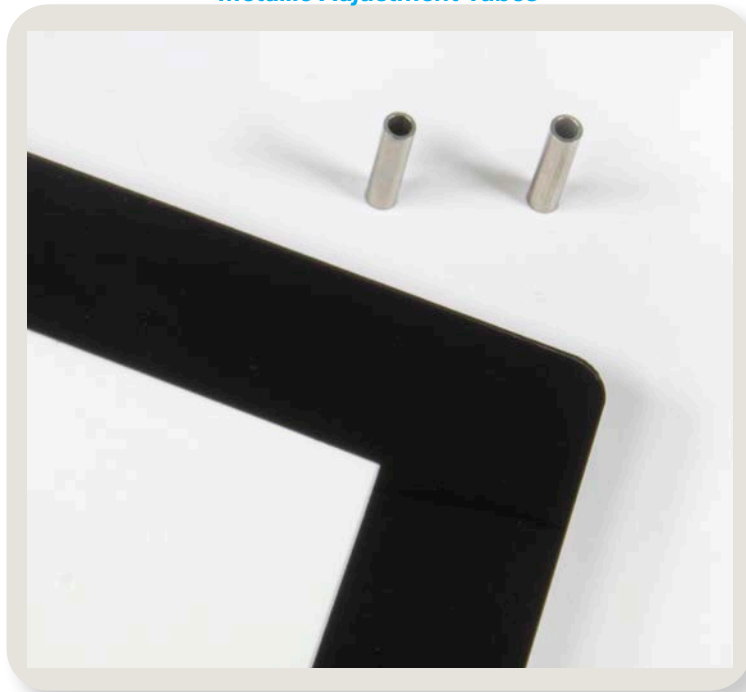

### Insert Hanging Cable in Tube

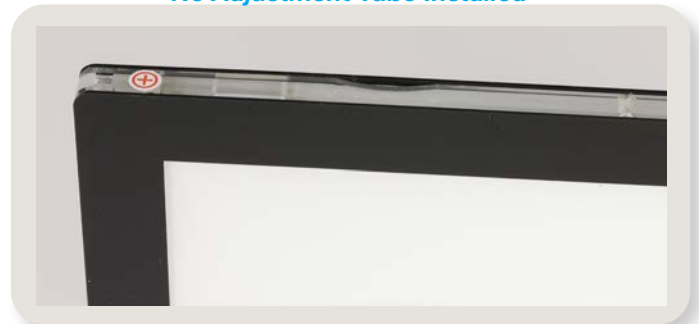

### Multiple Panels per Column

### Metallic Adjustment Tubes

### No Adjustment Tube Installed

### Adjustment Tube Installed

### Warning

Refer to the Display It LED Panel Installation Guide for complete installation instructions.

**A**

Choose Panel Display It orientation (portrait or landscape). Insert the metallic adjustment tubes in the holes designed for this purpose at both top corners of each panel regardless of the orientation (portrait or landscape). Do not push on the tubes, they must not be fully inserted into the panel.

### IMPORTANT

The tube activates the panel's internal adjustment mechanism. **If not used, the hanging cable passing through the panel will never be removable and the height of the panels won't be adjustable.**

**B**

Insert the hanging steel cable in the tube; then in the panel until the cable comes out at the bottom of the panel.

**C**

When installing more than one panel per column, do not forget to use the metallic adjustment tubes on each additional panel.
