

Classic Ceiling Track A1008

PARTS LIST

Open Face

Closed Face

Warning

The track is supplied with screws and TripleGrip® plastic screw anchors that are suitable for mounting the track to gypsum panels, lathe and plaster, concrete, masonry block, etc. All holes in track should be filled with a suitable screw/fastener combination.

Property damage and personal injuries can occur from track mount failure. To prevent such failure it is the responsibility of the installer to select a suitable fastener for a particular installation.

1 Orientation

- Normal track orientation is horizontal with the mounting surface against the ceiling.
- Open face installation allows for the cable/rod to closely follow the adjacent wall.
- Closed face installation is more discreet.
- The ceiling should be straight, Classic Ceiling Track is rigid and does not easily bend.

NOTE

While the illustrations to the left feature cables, this track is also compatible with rods.

2 Measure

- Measure your wall segments. For a perfect look that blends into the decor, install your tracks wall-to-wall.

TIP

To join two tracks at an inside/outside 90° corner, cut both ends at 45° to have a perfect fit.

Proper Blade

3 Cut or Trim Track

- Cut track as needed and remove any burrs. Straight and burr-free cuts will make seams between adjoining track almost invisible.

TIP

Cut the track with a hack saw and miter box or power miter saw with proper blade.

4 Mark and Prepare Holes

- Trial place each track length and mark mounting holes.
- Use a stud finder or drill 1/16" pilot holes to probe for structure (ceiling joist).

Anchor

Colored Screw

5 Mounting Track

- If no structure is present, expand the hole to 1/4" and insert supplied anchors.
- Fasten track to prepared holes with supplied fasteners.

Open Face

Closed Face

6 Options

- For Tensioned Cables/Rods you will need a second, lower track. Mount that one opposite of the upper track with the mounting surface against the floor. Use Cable Tensioners or Rod-End Hangers (sold separately).
